Whereas although pharmaceutifor misuse, most fentanyl de	cal fentanyl can be diverted eaths are believed to be linked

to illicitly manufactured fentanyl and illicit versions of

chemically similar compounds known as fentanyl analogs (collectively referred to in this preamble as "illicit

fentanyl");

- Whereas illicit fentanyl is potentially lethal even if only a very small quantity is ingested or inhaled;
- Whereas across the United States, illicit fentanyl use and related deaths are rising at alarming rates;
- Whereas illicit fentanyl is cheaper to manufacture than heroin and the sale of illicit fentanyl is highly profitable for drug dealers;
- Whereas illicit fentanyl is sold for its heroin-like effects and illicit fentanyl is often mixed with heroin, cocaine, or methamphetamine as a combination product, with or without the knowledge of the user;
- Whereas illicit fentanyl is often produced to physically resemble other opioid pain medicines, such as oxycodone, which sell for high amounts on the street;
- Whereas drug users often overdose on illicit fentanyl because users are unaware that they are ingesting illicit fentanyl and do not anticipate the toxicity and potential lethality of illicit fentanyl;
- Whereas, according to the Centers for Disease Control and Prevention, between 2013 and 2014, the death rate from overdoses caused by synthetic opioids, including illicit fentanyl and synthetic opioid pain relievers other than methadone, increased 80 percent;
- Whereas, in 2015, the Drug Enforcement Administration (referred to in this preamble as the "DEA") issued a National Drug Threat Assessment Summary, which found that Mexican transnational criminal organizations are—
  - (1) one of the greatest criminal drug threats to the United States; and
  - (2) poly-drug organizations that use established transportation routes and distribution networks to

traffic heroin, methamphetamine, cocaine, and marijuana throughout the United States;

- Whereas, in 2016, the DEA issued a National Heroin Threat Assessment Summary, which found that "starting in late 2013, several states reported spikes in overdose deaths due to fentanyl and its analog acetyl-fentanyl";
- Whereas the 2016 National Heroin Threat Assessment Summary found that—
  - (1) Mexican drug traffickers are expanding their operations to gain a larger share of eastern United States heroin markets; and
  - (2) the availability of heroin is increasing throughout the United States;
- Whereas between 2013 and 2014, there were more than 700 fentanyl-related deaths in the United States;
- Whereas the number of deaths attributable to illicit fentanyl may be significantly underreported because—
  - (1) coroners and medical examiners do not test, or lack the resources to test, routinely for fentanyl;
  - (2) crime laboratories lack the resources to test routinely for fentanyl; and
  - (3) illicit fentanyl deaths may erroneously be attributed to heroin;
- Whereas, in March 2015, the DEA issued a nationwide alert on illicit fentanyl as a threat to health and public safety;
- Whereas illicit fentanyl has the potential to endanger public health workers, first responders, and law enforcement personnel who may unwittingly come into contact with illicit fentanyl by accidentally inhaling airborne powder;

Whereas, according to the DEA—

(1) Mexico is the primary source for illicit fentanyl trafficked into the United States; and

(2) distributors in China are the source of the fentanyl analogs and the precursor chemicals to manufacture fentanyl analogs that are found in Mexico and Canada;

Whereas fentanyl produced illicitly in Mexico is—

- (1) smuggled across the southwest border of the United States, or delivered through mail and express consignment couriers; and
- (2) often mixed with heroin or diluents in the United States and then distributed in the same United States markets in which white powder heroin is distributed; and

Whereas United States law enforcement officials have recently seen—

- (1) an influx of illicit fentanyl into the United States directly from China;
- (2) shipments of the equipment to manufacture illicit fentanyl, such as pill presses; and
- (3) some illicit fentanyl products being smuggled into the United States across the northern border with Canada: Now, therefore, be it
